Top 10 Questions Asked about Computer Networking

1. **What is computer networking and how does it work?**
   (Covers basic definitions, components, communication between devices, and beginner-friendly explanations.)
2. **What are the different types of networks (LAN, MAN, WAN) and how do they compare?**
   (Includes use cases, advantages, limitations, and how multiple LANs combine into a larger network.)
3. **How do devices communicate over a network and what protocols are used (OSI/TCP-IP model)?**
   (Explains how data travels, what happens at each OSI layer, and common protocols involved.)
4. **What are the key differences between wired and wireless connections (Wi-Fi, Ethernet, Cellular, Satellite)?**
   (Discusses speed, reliability, cost, security, and technologies used in long-distance communication.)
5. **What are IP addresses and MAC addresses, and how do they differ?**
   (Includes their roles, assignments, OSI layers, and real-world analogies.)
6. **What's the difference between a switch, router, firewall, access point, and other network devices?**
   (Explains each device's purpose, how they connect, and their functions in a small/home network.)
7. **What is a network protocol and why is it important?**
   (Focuses on communication rules between devices and protocol roles in reliable transmission.)
8. **What are Client-Server and Peer-to-Peer (P2P) networks and how are they used in real life?**
   (Includes benefits, drawbacks, and everyday examples of both models.)
9. **How can users stay safe when using public Wi-Fi and shared networks?**
   (Discusses data protection, security threats, and practical safety tips.)
10. **What are the practical limitations of different networks (SOHO, LAN, WAN), and how do devices interact on them?**
    (Covers scalability, performance, compatibility, and device roles like IoT, servers, and clients.)
